

## Product Information Bulletin

September 24, 2008

To: Whirlpool Distribution

Subject: Packaging Changes

Models: W2C3, W2H3, W2C4, and W2H4

During the month of October 2008 the Whirlpool Standard AC and Heat Pump products will begin to undergo a packaging change. The product is currently packaged on a wooden skid with corner posts and wrapped in clear wrap and will continue until the supply of material is exhausted. It has been decided to change to the appliance style packaging to be consistent with the other Whirlpool products and is designed to be handled with a Basiloid forklift attachment. The following page describes the carton and recommended methods to handle the product. We are certain this change will be an improvement to product quality.

If you have any questions contact Tradewinds at 904-407-4470.

Regards,

Larry Pittman  
Director of Operations

Note: The carton indicates from which side to truck the product and at no time is a clamp indicated to be used to handle any of this style packaging.
